Mike,

I wanted to let you know that we have had an issue with the boom becoming detached and are working to get it reconnected. I will let you know as soon as we have it reconnected.

Jim

Mike,

We will make sure that we notify you and the USCG about any complications.

My only request is that timely notifications are made if any complications are encountered or unanticipated conditions that may release, or threaten additional release to Lake Michigan

Mike,

As of this morning, the boom has been reconnected around the outfall. Please let me know if you have any questions.

Mike,

The horseshoe boom around the outfall did break free last night due to the storms. We have not been able to safely deploy our teams to repair the boom because of the choppy water. We do plan to have our teams in the water as soon as it is safe to do so. I will contact you when it has been redeployed.

Since installing the boom as a secondary precaution while 6 separator skimming activities are ongoing, there has been no oil observed at the outfall nor have the absorbent pads/poms shown any oil.

Jim-

It is my understanding that the U boom around the outfall broke free last night. Could you provide some additional details?

Thank you,

Mike Beslow
